

ICE MELT

SAFEGUARDING YOUR WINTER STEPS

WHAT IS ICE MELT?

Ice Melt is a fast acting, high performance de-icer designed to protect against dangerous snow and ice build-up. As a greener, non-corrosive alternative to rock salt, spread it evenly over critical areas to ensure safer walkways and prevent falls, even in extreme conditions.

10x

more effective and faster than rock salt at melting ice and snow.

-50°

remains effective in extreme cold, preventing sheet and black ice.

NO

impact on concrete, vehicles, wildlife. Unlike rock salt, it is not corrosive.

NO

refreezing for several days. Keeping you safer with less wastage.

HOW IT WORKS

The blend of natural materials is specially designed to maximise de-icing performance. On contact with ice or snow, the incredible exothermic reaction melts away any signs of winter.

WHERE TO USE

Ice Melt is suitable in all outdoor locations (pedestrian passageways, vehicle access, entrances and exits, stairways, warehouses, factory floors, & more).
